Tactical publications

document the depletion of community resources by Big Tech infrastructure, remind our organisations to organise digital infrastructures in our interest, dream up alternative methods of otherwise exuberant joyful survival, and imagine local networks for transnational modes of communicating and operating in transversal solidarity.

The Cloud

What is The Cloud? 📄

The Cloud is a term for centrally managed computational power, with a promise to optimize for flexibility or agility. The Cloud brings huge amounts of computers together, and then offers smaller and larger bits of computers as a service. The Cloud we want to resist is run by Big Tech companies such as Amazon, Google and Microsoft, who rent out processing power to other companies or organisations.

The Big Tech Cloud is not just other people's computers. It consolidates a software paradigm that counts on continuously updated software-as-a-service, with scalable computational infrastructures and lots of smartphones, and the political economy of publicly traded Big Tech companies. The profits of Big Tech Cloud count on the extraction of energy, minerals, data and racialised labour.

What is up with The Cloud? 📄

Because Cloud companies (Amazon, Alphabet, Meta, Microsoft) are owned by shareholders, they need to prove growth year on year. This means that they should always become more efficient and expedient, to allow
